The reason a baby's blood type isn't always the same as his mother is that blood type is based on genes from each parent. So, for example, a mother who is type O and a father who is type A could have a child who is type A. The reason the baby wouldn't have type O blood, like his mom, is because the gene for O is recessive.

Download Ebook Babies Need Mothers How Mothers Can Prevent Mental Illness In Their Children

The term "unfit mother" arises out of the now-outdated child custody doctrine that custody of children should be awarded to the mother unless the mother was "unfit." [1] X Research source Today, courts strive to settle on a custody arrangement that is in the best interests of the child, without bias in favor of the mother or father.
