A computer engineer should be able to interface and maintain key-board, printer, mouse monitor etc along with the computer system. The course provides the necessary knowledge and skills regarding working construction and interfacing aspects of peripherals.

5.1 COMPUTER PERIPHERALS AND INTERFACING

Strictly speaking, an interface is just a boundary or border line between two different objects. In the context of a computer system, an I/O interface is the physical dividing line between the computer system and its I/O devices. In order for an interface to connect two pieces of equipment successfully, several requirements must be met.

The Serial Peripheral Interface (SPI) is a synchronous serial communication interface specification used for short-distance communication, primarily in embedded systems. The interface was developed by Motorola in the mid-1980s and has become a de facto standard. Typical applications include Secure Digital cards and liquid crystal displays.

Serial Peripheral Interface - Wikipedia

In computing, an interface is a shared boundary across which two or more separate components of a computer system exchange information. The exchange can be between software, computer hardware, peripheral devices, humans, and combinations of these. Some computer hardware devices, such as a touchscreen, can both send and receive data through the interface, while others such as a mouse or ...
