### The Map Turtle And Sawback

The black-knobbed map turtle (*Graptemys nigrinoda*), formerly known as the black-knobbed sawback, is a small to medium-sized aquatic turtle with light gray skin. Some of the most distinguishing characteristics of the black-knobbed map turtle, and the *Graptemys* genus, are the protruding "spikes" on the turtle's carapace. This species inhabits mainly the fall lines of rivers in the Mobile Bay ...

### Black-knobbed map turtle - Wikipedia

About this book . Covering all facets of the biology of a little-known genus, Peter V. Lindeman's lavishly illustrated *The Map Turtle and Sawback Atlas* is both a scientific treatise and an engaging introduction to a striking group of turtles. Map turtles and sawbacks, found in and along rivers from Texas to Florida and north to the Great Lakes, fascinate ecologists and evolutionary biologists.

### The Map Turtle and Sawback Atlas: Ecology, Evolution ...

The Map Turtle and Sawback Atlas is an excellent book with 460 pages containing a wealth of new information on these exceptionally beautiful turtles. The text is well written and comprehensive. The maps delimit state and county boundaries with relevant rivers illustrated in blue and dots for locality records, unfortunately museum specimens are not identified.

The Map Turtle and Sawback Atlas: Ecology, Evolution, Distribution, and Conservation covers the entire biology of a little-known genus and provides turtle scientists and scholarly natural history collections with a fine guide to the map turtles and sawbacks found around the country.

### **The Map Turtle and Sawback Atlas. - Free Online Library**

The term 'sawback' is attributed to three (and possibly a fourth) of the map turtles species. They are designated as sawback map turtles because of their extremely accentuated scutes going down the center of their carapace, the vertebral keel. The rear of these vertebral scutes, especially the first three, strongly juts upward creating a serrated or saw-like appearance.
